

## ABSTRACT

1 A portable electronic device including a device printed  
2 wiring board; an electrical connector connected to the  
3 device printed wiring board; and a camera coupled to the  
4 device printed wiring board by the electrical connector  
5 at a sliding height connection. The sliding height  
6 connection allows the camera to slide relative to the  
7 electrical connector along a first axis to allow  
8 positioning of the camera relative to the electrical  
9 connector at one of a plurality of different heights  
10 along the first axis.
